

Abstract

A mixing faucet includes a body part (2), where a rotatable swivel tap (4) is mounted on said body part and a rotatable valve spindle (6) is mounted in said body part for  
5 an adjustment of the feeding of cold and hot water, respectively. The rotatable valve spindle (6) is according to the utility model equipped with a projecting arm (8) engaging a groove in a slide (10) on the side of the body part (2). The resulting mixing faucet is much easier to handle than hitherto known.
